Towards Sustainable Architecture -Finland's Architectural Policy Programme 2022-2035

Emma Harju
Senior Ministerial Adviser
Ministry of Education and Culture, Finland

31 March 2023

What is Apoli?

- The architectural policy programme, or *Apoli*, offers a "a comprehensive perspective on the goal-oriented development of Finland's built environment" for 2022-2035
- The programme...
 - Works as a strategic instrument and a driver for discussion
 - Proposes measures and shares responsibility
 - Is aligned with current European and international initiatives: New European Bauhaus
 & Davos declaration.

Preparation of the *Apoli* programme

- The programme is based on the work by a working group appointed by the Ministry of Education and Culture and the Ministry of the Environment
 - Shared competences
 - Architecture Ministry of Education and Culture
 - Built environment Ministry of the Environment
 - Regional and urban policy Ministry of Economic Affairs and Employment
- Participatory process;
 - Multi-stakeholder working group, workshops
 - Proposal 2021
 - · Circulation for comments
 - Finalisation: feedback from consultation, support from scientific panels
 - Publication January 2022
- Second architectural policy programme in Finland, previous programme from 1998

Towards Sustainable Architecture – how?

Main themes and goals

- The ecological, social, economic and cultural sustainability of the built environment is at the heart of the programme
- The programme aims to strengthen cooperation between stakeholders that influence our built environment; this includes residents, communities, individuals etc.
- The programme encourages the development of "local architectural policy programmes" – implementation on both national and local levels

The programme consists of five chapters

- I. Climate change and biodiversity
- II. Equality and inclusion
- III. Economy and internationality
- IV. Meaning and identity
- V. Education and research

Climate change and biodiversity

Measures include:

- Promoting the ecological sustainability of building design
- Supporting climate- and biodiversityaware land use
- Extending the low-carbon approach and circular economy to cover the planning of local environments
- Promoting the flexible and diverse use of premises, buildings and areas

Equality and inclusion

Measures include:

- Promoting people's inclusion and reducing inequality
- Promoting local and neighbourhoodlevel development
- Strengthening the quality and diversity of housing and housing construction
- Increasing awareness of the impact of the built environment on wellbeing and health

Photo: Jussi Hellsten / Helsinki Partners, Visit Finland.

Economy and internationality

Measures include:

- Promoting the role of architecture in solving social and cross-disciplinary problems
- Strengthening procurement and design expertise
- Promoting the wide use of opportunities afforded by digitalisation in architecture and urban planning
- Supporting regional development and attractiveness by means of architecture

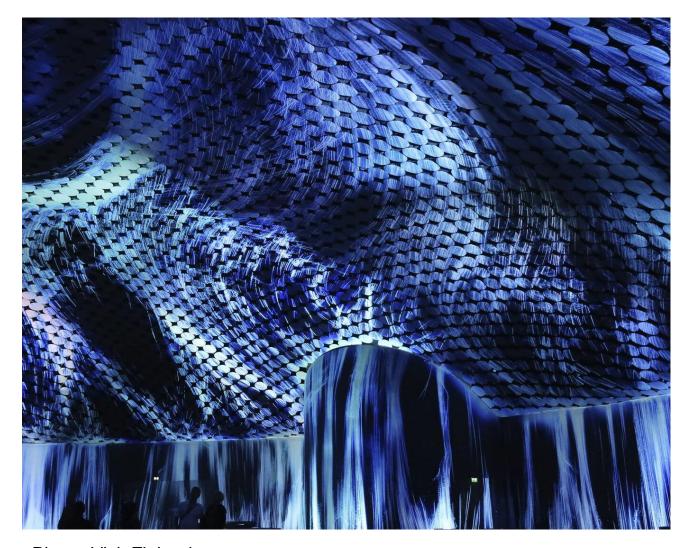

Photo: Visit Finland.

Meaning and identity

Measures include:

- Stimulating discussion on the living environment
- Strengthening the identity of locations and places
- Fostering the cultural values of the built environment
- Strenghtening the culture of architectural exhibitions and events

Photo: Juho Kuva/Visit Finland.

Education and research

Measures include:

- Fostering the development of educational provision
- Supporting responsiveness to future competence needs
- Encouraging research on the built environment
- Strengthening architectural and design education

Sustainable architecture is multidimensional

Each chapter of the Programme relates to a dimension of sustainability

Education and research underline all dimensions.

Architecture can be sustainable only, if all four dimensions are taken into consideration.

The programme aims to reduce the **footprint of construction** and to enhance **the handprint of architecture**.

Architectural sustainability

The programme proposes a new concept of architectural sustainability.

Architectural sustainability

Based on cultural sustainability ecological, economic and Supports social sustainability Manifested in high-quality building culture existing buildings and other aspects of cultural heritage Covers planning and design of buildings, facilities, areas and landscapes quality that is long-lasting and Means aesthetic and functional by nature

Implementation

The programme is implemented as a joint effort

- Implementation and monitoring of the programme supported by a coordination group; chaired by Ministry of Education and Culture with members from
 - Ministry of the Environment
 - Ministry of Economic Affairs and Employment
 - Arts Promotion Centre
 - Finnish Heritage Agency
 - Archinfo Finland (information centre for architecture).
- Communication through Archinfo Finland: project to stimulate discussion on architectural policy and to communicate on current projects and initiatives related to the programme (funded by the Ministry of Education and Culture)

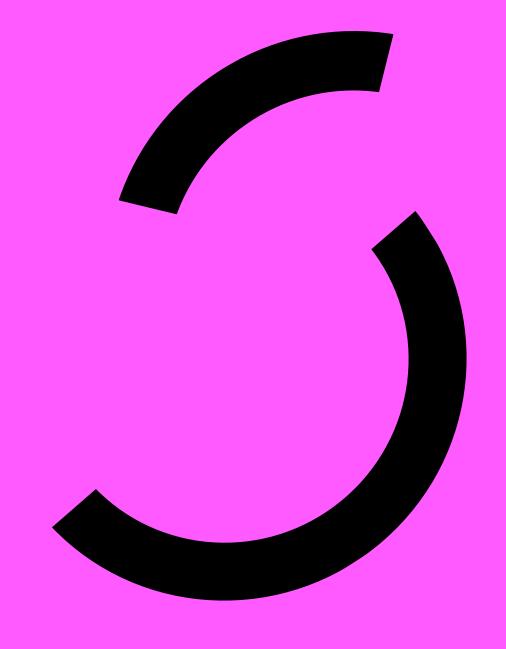

Architectural policy on different levels

*Centres for Economic Development, Transport and the Environment

Apoli in practice

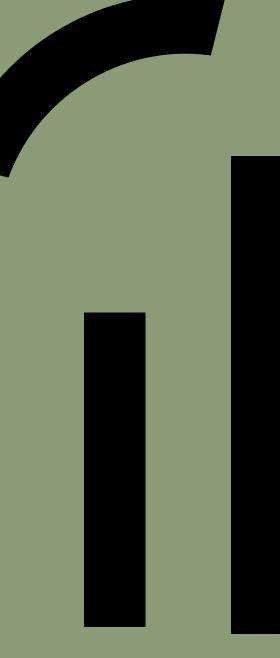

"New Local"

- Development group for actors interested in promoting architectural policy on the local level
 - 8 participants through an open call
- Managed by Arts Promotion Centre
- Final publication will compile discussions in a format that can be shared; what kind of possibilities can be imagined to promote sustainable architecture on the local level?

Thank you!
